## POST /user-group/index

### Description

Create User Group

### Endpoint

/user-group/index

### Method

POST

### Parameters

Name	Type	Required	Description
name	string	Y	The name
configuration	string	N	JSON formatted configuration

### Example configuration

```
{"mod_grapeshot_channel_url": "URL_HERE" }
```

## POST /user-group-member/index

### Description

Add User to User Group

### Endpoint

/user-group-member/index

### Method

POST

### Parameters

Name	Type	Required	Description
user_group_id	int	Y	The User Group ID
user_id	int	N	Default: current user id
primary	int	N	0 = Group Reader (default) 1 = Group Writer When the user creates an object (e.g. pixel) in the interface (or api) and primary is set to 1, it will also be added to the group. When it's 0 it's only visible for the user.

## DELETE /user-group/index

### Description

Delete User Group

### Endpoint

/user-group/index

### Method

DELETE

Parameters

Name	Type	Required	Description
id	int	Y	Unique identifier
